Twilight at Noon

American planning for a hundred holocausts

J'accuse:

Humanity, America, all nuclear weapons states (NWS) but especially US and Russia, the US national security apparatus and elite; SAC, USAF, USN; NATO (and its supporters, CFR, Atlantic Council...), 12 US administrations (FDR to BHO), and over the same period Congress (both parties), the MIC (especially aerospace and electronics; corporations with special interest in empire, particularly oil and finance), courts, media, universities, churches (most): excepting individuals in all these institutions except the Executive; unions; most of the public in the US; corresponding institutions and publics in all NWS, especially Russia; and with few exceptions, leaderships in all other countries

For (leaderships) initiating, directing, promoting, concealing and lying about, and managing the development, construction, expansion and operational readiness and threatening implementation of **Doomsday Machines** (US and Russia) capable of ending most life on earth in a nuclear winter, and **Weapons of Unprecedented Massacre** (all other nuclear weapons states [NWS]).

And (all others than leaders-- minus exceptional groups and individuals—in all NWS) for participation in this sixty-seven-year process, and/or concealment of it, tolerating it without active exposure or resistance of it, facilitating it, enabling it, celebrating and worshipping it, “demanding” it politically (punishing candidates seeking to restrain it), remaining willfully ignorant about it, accepting false rationales without challenge, acting effectively indifferent to the long-run (and recurrently, short-run) dangers to their nations and others and to the survival of humanity and other forms of life posed by the existence, operations, threats and possible implementation of these Machines and Weapons Systems.

To a lesser extent, these charges apply—in the form of sins if not crimes of omission, in the leaderships and publics of all other nations on earth (NNWS—non-nuclear weapons states), all of whom are directly threatened by the plans and preparations for nuclear war by the NWS. *Not one* such state has even remotely done what its leaders and public could and should have done to protest, expose, condemn, resist and avert this global danger.

These accusations are exactly comparable to those we still, retrospectively, level at the Nazi leaders, their subordinates and their German citizenry (and the leaders and publics of other countries including our own) with respect to the development and implementation of the machinery for the Final Solution.

That was conceived as a “special operation” that would constitute the final solution¹ to the “Jewish problem”: the presence of members of the “Jewish race” in Germany and those parts of Europe to be occupied by Germans (East Europe and Western Russia).

Implementation of SAC war plans—the SIOP and its predecessors—under whatever circumstances, would have meant the Final Solution of the “Russian problem”: the physical existence of Russian society, as a base for Soviet-directed Communist expansion.

It would also, in the Fifties and beginning of the Sixties, also have accomplished at the same time the Final Solution of the Chinese (Communist) Problem.

As collateral damage—undesired but inescapable—execution of these plans would have annihilated the populations of East Europe, a number of other countries bordering the Soviet Union and China, and possibly a hundred million West European citizens in NATO (apart from the effects of any Soviet retaliation).

i, 2β The total death-toll, as planned and estimated by our JCS, would have been between one hundred and two hundred Holocausts.

But the JCS, along with all nuclear scientists and all decision-makers in the US in the Fifties, Sixties and Seventies of the last century were ignorant of the possible total effects of executing their operational plans for general war. No one had allowed for a particular effect (in addition to deaths, injuries and destruction from blast, radiation and heat): the smoke and soot from a thousand cities and forests burning simultaneously.

Not until 1982-83 were calculations made—confirmed in 2007-08—that this could cause a “nuclear winter,” blotting out sunlight worldwide for a year or more, lowering temperature 20 degrees C over much of North America and 30 degrees in summer over much of Eurasia, including most agricultural regions.

The speed and scale of the climatic change would be unprecedented over the history of the human species. With food production disrupted for the first of several years, “most of the people on the planet would run out of food and starve to death by then.” The cooling would last for years, with catastrophic climatic effects for a decade.¹

It would be a final solution of the human problem.

¹ (other methods to the same end having been considered and rejected as infeasible, such as deportation to Madagascar or to other countries that would accept all Jewish deportees from Germany and other parts of Europe.)

Not only the problems of humans: it would lead to the extinction of most complex forms of life on earth, the Sixth Great Extinction (the last such having occurred with the “impact winter” that wiped out the dinosaurs, sixty-seven million years ago).

How do we judge the responsibility and culpability of various institutions and individuals for the dangers and moral risks associated with this project, and the corresponding one that followed on in the Soviet Union)?

And what would have been necessary, or possibly effective, to avert the construction of these dangerous systems? Who would have had to do what? The point of asking such questions is to learn right now how to postpone and ultimately avoid the culmination of all these efforts in apocalyptic disaster. What must we do?

ⁱ [from Wikipedia, Nuclear Winter, 5-16-9]:
Climatic effects

A study presented at the annual meeting of the American Geophysical Union in December 2006 found that even a small-scale, regional nuclear war could produce as many direct fatalities as all of World War II and disrupt the global climate for a decade or more. In a regional nuclear conflict scenario where two opposing nations in the subtropics would each use 50 Hiroshima-sized nuclear weapons (about 15 kiloton each) on major populated centres, the researchers estimated fatalities from 2.6 million to 16.7 million per country. Also, as much as five million tons of soot would be released, which would produce a cooling of several degrees over large areas of North America and Eurasia, including most of the grain-growing regions. The cooling would last for years and could be "catastrophic" according to the researchers. [4] [5]

[edit] Ozone depletion

A 2008 study published in the Proceedings of the National Academy of Science found that a nuclear weapons exchange between Pakistan and India using their current arsenals could create a near- global ozone hole, triggering human health problems and wreaking environmental havoc for at least a decade.[6] The computer-modeling study looked at a nuclear war between the two countries involving 50 Hiroshima-sized nuclear devices on each side, producing massive urban fires and lofting as much as five million metric tons of soot about 50 miles (80km) into the stratosphere. The soot would absorb enough solar radiation to heat surrounding gases, setting in motion a series of chemical reactions that would break down the stratospheric ozone layer protecting Earth from harmful ultraviolet radiation.
